I'm a self taught web developer and have worked on a range of freelance and personal projects. Underpinned by a degree in Graphic Design, I'm a creative problem solver with keen eye for detail.
I also know how to run a pub but let's not focus on that, shall we?

WORK

Freelance —*Web developer*

2017 - PRESENT

Responsible for designing, wireframing and developing projects from start to completion.
– I created a brand identity and a responsive website for a construction company (details overleaf).
– Maintained good relations with the client by providing consistent updates and implementing changes when required in a timely fashion.
–Range of personal projects aimed to explore, build on and expand my current skill set.
–Solving JavaScript challenges daily as a form of mental workout.

JD Wetherspoon — *Manager*

2017 - PRESENT (part time)

2015 - 2017

Successfully managing a financially profitable pub, resulting in frequent monetary bonuses for myself and my team.
–Recruiting, training and managing staff (team of 10–15).
–Monitoring budgets, performance, stock control and ordering.

EDUCATION

University of The Arts London—
BA (Hons) *Graphic Design Communication*
2009 - 2012

I learned to quickly transform vague ideas into tangible concepts, and how to get the message across by visualising the idea behind it, regardless of the medium. I worked on a range of projects that involved use of print, film, photography, animation and typography.

LANGUAGES

HTML, CSS & Javascript

FRAMEWORKS & LIBRARIES

React JS, Materialize, Bootstrap, Sass

SOFTWARE

Adobe Package:

Illustrator, Xd, Photoshop, InDesign

Other

GitHub
FTP Clients (FileZilla, Cyberduck)
Postman,
Basic Terminal Navigation,

Propertier — *Full stack React JS App*

App designed to help manage multiple properties, by giving the user a condensed overview of the current premises in the user's portfolio. Easily add, remove or change status of a property (rented, renovating, sold etc) and see the total income from all rent, across all properties. It provides easy access to checklists used when inspecting properties, and to document to download. Materialize framework was used to provide mobile responsiveness and speed up the development process. Propertier was built using MERN stack.

Front End:
ReactJS, HTML, CSS, Materialize

Back End:
MongoDB, Express, Node

Ladiva Construction — *Responsive Website*

This is a pamphlet-style website made for a Warsaw based construction company specialising in renovation and property resale. It uses a bit of PHP for the contact form and a Simple Lightbox and CSS grid for the gallery in the project section. This is currently a work in progress (work stopped due to Covid-19).

http://ladiva-construction.com

Front End:
HTML, Sass, SimpleLightbox
Back End:
PHP (Contact Form)

GitHub USer Finder — *React JS App*

This app uses Github's API to search users and display them in a condensed profile page. It will display their name, picture, following and 5 pinned repositories. This React app was initially written using class components, then refactored to use hooks.

Front End:
—ReactJS, HTML, CSS
Back End:
—GitHub API
